GRAVIO embossed type

3 Reasons Why GRAVIO embossed type Is Selected

A step up in Luxury!

Although residential housing tends to contain familiar building materials, you can easily upgrade the aesthetics in your house by installing GRAVIO embossed type panels in any part of the home.

Faster Installation Than Tiles!

GRAVIO embossed type panels are made from non-combustible volcanic ash and are extremely lightweight and easy to work with. The large panel sizes and ease of cutting, shorten installation times by 30%. Installation can be accomplished simply with adhesive and pin nails as per manufacturer instructions.

Possible Cost Reduction of Installation

Compared to installing tiles, there is no need for a professional plasterer and it is possible to install GRAVIO embossed type via basic carpentry. There are many examples when using GRAVIO embossed type which highlight reductions in total cost including materials and labor.

You can upgrade the atmosphere of home entrances, bedrooms, living/dining rooms and kitchens, by changing the expression of the walls using GRAVIO embossed type. There are 30 color/texture options to choose from!

An Elegant and Natural Modern Space

Large pieces of beautiful stone patterns create a perfect combination of modern and Japanese tastes. Ceiling patterns compliment the contrasting geometries, resulting in a visually pleasant welcome for all visitors.

Traditional and Chic Modern Style Entrance

This entrance exudes both gorgeousness and elegance. The wall contains brick patterns that come with a sense of rugged stony texture. The use of backlighting or in this example sconce lighting really sets off the 3-dimensional patterns and adds depth of shadow.

Natural Living Room With Warmth

Here, the use of GRAVIO embossed type in the living area creates an atmosphere like a lounge by dimming indirect lighting. The selection of light colors, warm wood tones and the soft lighting approach on this particular texture add an appeal of classiness and peaceful calm.
